APRIL EXAMINATION

NATIONAL CERTIFICATE

BUILDING AND STRUCTURAL SURVEYING N4

(8060034)

10 April 2015 (Y-Paper)
13:00–16:00

Calculators may be used.

This question paper consists of 5 pages, 1 diagram sheet and 1 formula sheet.

DEPARTMENT OF HIGHER EDUCATION AND TRAINING
REPUBLIC OF SOUTH AFRICA

NATIONAL CERTIFICATE
BUILDING AND STRUCTURAL SURVEYING N4
TIME: 3 HOURS
MARKS: 100

INSTRUCTIONS AND INFORMATION

1. Answer ALL the questions.
2. Read ALL the questions carefully.
3. Number the answers according to the numbering system used in this question paper.
4. ALL the diagrams, sketches and drawings should be large and in good proportion, fully and clearly labelled and done in pencil.
5. Write neatly and legibly.

Copyright reserved

QUESTION 1

Define the following survey terms:

1.1 Tacheometry

1.2 Bearing

1.3 Field party

1.4 Change point

1.5 Graticule

(5 × 2) **[10]**

QUESTION 2

2.1 Give THREE reasons why plane surveying and not geodetic surveying is used on a building site. (3)

2.2 Give FIVE reasons why the proper recording of field notes is a very important part of surveying practice. (5)

2.3 In mapping coordinates are used to describe a point.

Draw the South African coordinate system showing ALL the relevant information. (8)
[16]

QUESTION 3

3.1 On a map with a scale of 1 : 50 000, what distance in metres does 28 mm represent? (3)

3.2 A rectangular area was measured on plan and found to be 375 mm × 215 mm.

Calculate the ground area in hectares. The scale is 1 : 2 500. (3)

3.3 Calculate the area of a segment of a circular area with radius 54 m. The included angle is 42°. (6)

3.4 Name the THREE angular measurements used in surveying. (3)

3.5 The quadrant bearing of a line BC is N 63° W.

What is the direction of the line BC? (2)

Copyright reserved

3.6 *Mistakes* is a term used in surveying.

3.6.1 Explain what is meant by this term. (2)

3.6.2 Give TWO examples. (2)

3.6.3 Can adjustments be made? (1)
[22]

QUESTION 4

4.1 State FOUR disadvantages of chain surveying. (4)

4.2 Beside the steel tape, name THREE types of tapes used in surveying. (3)

4.3 A base line of 800 m has to be accurately established.

What distance must be measured with a tape which is known to be 0,65% too short? (4)

4.4 A measured distance of 70 m was obtained with a steel tape at 34° C.

Calculate the standard temperature if the coefficient of linear expansion is 0,0000113/C and the temperature correction is +0,011 m. (6)

4.5 A length of 272 m was measured with a steel tape 2 300 m above sea level. The radius of the earth is 6 373 kilometres.

Calculate the correct distance. (4)
[21]

QUESTION 5

5.1 Describe, with the aid of neat sketches, how to solve each of the following practical problems by using a tape:

5.1.1 To obtain a distance AB across a wide river (5)

5.1.2 Setting out a perpendicular line from a point on the line (5)

5.2 Explain the term *collimation error.* (3)
[13]

QUESTION 6

The field book on the DIAGRAM SHEET (attached), gives details of a chain survey to establish the position of a building measuring 20,0 m × 12,0 m.
ALL measurements are given in metres.

Plot the stations, lines and detail to scale 1 : 500 in the ANSWER BOOK. **[10]**

QUESTION 7

7.1 What is the function of the bubble tube in survey instruments? (2)

7.2 Name TWO types of liquid used in a bubble tube. (2)

7.3 Give TWO reasons why these types of liquid are used. (2)

7.4 Why is a bubble tube curved? (1)

7.5 Why are a number of small lines engraved on the bubble tube? (1)
[8]

TOTAL: 100

BUILDING AND STRUCTURAL SURVEYING N4

FORMULA SHEET

Any other applicable formula may also be used.

1. $A = \frac{1}{2}b \times \perp h$

2. $A = \sqrt{s(s-a)(s-b)(s-c)}$, $s = \frac{a+b+c}{2}$

3. $A = \frac{(a+b) \times h}{2}$

4. $A = a \times h$

5. $A = \frac{d}{3}\left[(y_1 + y_n) + 2(y_3 + y_5 + ... + (y_{n-2})) + 4(y_2 + y_4 + ... + y_{n-1})\right]$

6. $A = d\left[\left(\frac{y_2 + y_n}{2}\right) + y_2 + y_3 + ... + y_{n-1}\right]$

7. $C = L \times e \times (t_m - t_s)$

8. $C = \frac{w^2 L^3}{24\,T^2}$

9. $C = L(1 - \cos\theta)$

10. $C = H(\sec\theta - 1)$

11. $C = \frac{L.H}{R}$

12. $A = \frac{1}{2}\,abSinC$
